

Linux/10G Upgrade Begins at 5pm Friday, November 2nd 2007

Thanks to the hard work of all the folks in ECG and CIS, and the successful testing by our users, FAST and STHR's we will be going live with the new Linux/Oracle 10g environment this coming weekend. The general schedule is:

Friday, November 2 at 5:00 p.m.

User access to Banner HR and Finance will be stopped so that SysAdmins and DBA's can work through their task list over the Friday-Saturday timeframe.

Sunday, November 4 - a.m.

ECG staff will do their review of the new environment.

Sunday, November 4 - p.m.

FAST and STHR to do their review of the new environment.

Monday, November 5

Banner access restored for all users - business as usual.

We're not predicting the exact time access will be restored - could be Sunday night or early on Monday morning. The critical times to note is that end of business on Friday, Banner access is disabled and start of business on Monday, Banner access is restored.
